Catching Rain Native Plant Sale
Salomon Farm Park Learning Center
*817 W. Dupont Road, Fort Wayne**

Saturday May 26, 2018 — 9 am to Noon

Rain Gardens, Native Plants and More!

Looking for a source of native perennial plants for your rain garden or landscape? Kick-off your Memorial Day weekend rain garden project or pick up plants on your way to the lake to add summer color around the cottage or along the pond edge.

Riverview Native Nursery owner and Master Gardener Martha Bishop-Ferguson will be available to consult with you on native plant selections and answer your questions.

City Utilities will be on-hand to answer your questions about rain gardens and how City Utilities' is encouraging the use of native plants in home and business landscapes.

Rain gardens use native plants with deep roots to help more rainwater soak into the ground instead of running off to pollute our waterways. Catching Rain Fort Wayne is once again sponsoring a native plant sale to provide a source for rain garden plants to improve the quality of water in our rivers. Riverview Native Nursery will be selling individual rain garden appropriate plants in various sizes, as well as rain garden kits that provide all the plants you need to get your rain garden started.

Riverview Native Nursery will also have native plants for well-drained soils.

Want to support native butterflies?

Many rain garden plants provide nectar and larval food for butterflies, such as Marsh Milkweed that is a host plant for the Monarchs and Golden Alexander that is the host for black swallowtails. Ask Martha about Monarch Waystation plants and kits!

* Due to construction on Dupont Road, you will need to approach Salomon Park from the Lima Road (west of the park entrance). Dupont Road will be closed between Coldwater Road and the Park entrance.
