Zone A: Front edge of garden where water enters. Use plants that are shorter and require less water.

Zone B: These side edges of the garden slope toward the center. Use medium height plants that prefer average soil moisture.

Zone C: Center of the garden and typically the wettest area. Use medium/tall plants that tolerate wet soil conditions.

Zone D: Tall plants should be placed at the back of the garden. These plants require average soil moisture.

IMPROVE THE SOIL
Adding compost or topsoil to your rain garden can help spur growth.
